Preliminaries

第1章 Preliminaries

1.1 基本的な表記

量化子 (quantifier) の束縛をコンマ (,) で続けて書く. 束縛の終わりをピリオド (.) で示す. 例えば,

$$\forall x_1 \in X_1, x_2 \in X_2. \exists y_1 \in Y_1, y_2 \in Y_2. x_1 = y_1 \land x_2 = y_2$$

は,

$$\forall x_1 \in X_1. \ \forall x_2 \in X_2. \ \exists y_1 \in Y_1. \ \exists y_2 \in Y_2. \ x_1 = y_1 \land x_2 = y_2$$

と等しい. また,量化子の束縛において, such that を省略し,コンマ (,)で繋げて書く. 例えば,

$$\forall x \in \{0, 1\}, x \neq 0. x = 1$$

は,

$$\forall x \in \{0,1\}. x \neq 0 \implies x = 1$$

と等しい. また, \Rightarrow , \iff が他の記号と混同する場合, それぞれ implies, iff を使用する.

集合 (set) について、以下の表記を用いる.

- 集合 A について、その**濃度** (cardinality) を |A| と表記する. なお、A が有限集合 (finite set) の時、濃度とは要素の個数のことである.
- 集合 A について、 $a \in A$ を a : A と表記する.
- **自然数** (*natural number*) の集合を $\mathbb{N} = \{0,1,...\}$ と表記する.また,n 以上の自然数の集合を $\mathbb{N}_{\geq n} = \{n,n+1,...\}$ と表記する.
- 自然数 *n* ∈ N について, {1,...,*n*} を [*n*] と表記する.
- 集合 A の**冪集合**を $\mathcal{P}(A) = \{X \mid X \subseteq A\}$,有限冪集合を $\mathcal{P}_{fin}(A) = \{X \in \mathcal{P}(X) \mid X \$ は有限集合 $\}$ と表記する.
- 集合 $A_1, ..., A_n$ の直積 (cartesian product) を $A_1 \times \cdots \times A_n = \{(a_1, ..., a_n) \mid a_1 \in A_1, ..., a_n \in A_n\}$ と表記する. 集合 A の n 直積を $A^n = A \times \cdots \times A$ と表記する. 特に、 $A^0 = \{\epsilon\}$ である.

n 項

- 集合 $A_1, ..., A_n$ の**直和** $(disjoin\ union)$ を $A_1 \uplus \cdots \uplus A_n = (A_1 \times \{1\}) \cup \cdots (A_n \times \{n\})$ と表記する. なお,文脈から明らかな場合,直和の添字を省略し, $a \in A_i$ に対して, $a \in A_1 \uplus \cdots \uplus A_n$ と表記する.
- 集合 $A \cap B$ との**差集合**を $A \setminus B = \{a \in A \mid a \notin B\}$ と表記する.

集合 Σ について、 $\bigcup_{n\in\mathbb{N}} \Sigma^n$ を Σ^* と表記する.この時、 $\alpha \in \Sigma^*$ を Σ による**列** (sequence) と呼ぶ.列について、以下の表記を用いる.

- $(\sigma_1, ..., \sigma_n) \in \Sigma^n$ について, $(\sigma_1, ..., \sigma_n)$ を $\sigma_1 \cdots \sigma_n$ と表記する.
- 列 $\alpha = \sigma_1 \cdots \sigma_n \in \Sigma^*$ について、その長さを $|\alpha| = n$ と表記する.

集合 A, B について、 $R \subseteq A \times B$ を**関係** (relation) と呼ぶ. また、

$$A \rightharpoonup B \stackrel{\mathrm{def}}{=} \{R \in \mathcal{P}(A \times B) \mid \forall x \in A, (x, y_1), (x, y_2) \in R. \ y_1 = y_2\}$$

という表記を導入し、関係 $f:A \rightarrow B$ を A から B への部分関数 (partial function) と呼ぶ. さらに、

$$A \to B \stackrel{\text{def}}{=} \{ f : A \to B \mid \forall x \in A. \, \exists y \in B. \, (x, y) \in f \}$$

という表記を導入し、部分関数 $f: A \rightarrow B$ を (全) 関数 (function) と呼ぶ。関係について、以下の表記を用いる。

- 関係 $R \subseteq A \times B$ について, $(a,b) \in R$ を a R b と表記する.
- 関係 $R \subseteq A \times B$ について、定義域 (domain) を $dom(R) = \{a \mid \exists b. (a,b) \in R\}$, 値域 (range) を $cod(R) = \{b \mid \exists a. (a,b) \in R\}$ と表記する.

1.1 基本的な表記 5

- 部分関数 $f: A \to B$ について, $(a,b) \in f$ を f(a) = b と表記する.
- 関係 $R_1 \subseteq A \times B$, $R_2 \subseteq B \times C$ について、その合成 (composition) を $R_1; R_2 = R_2 \circ R_1 = \{(x, z) \in A \times C \mid \exists y \in B. (x, y) \in R_1, (y, z) \in R_2\}$ と表記する.
- 関係 $R \subseteq A \times B$, 集合 $X \subseteq A$ について, R の X による制限 (restriction) を $R \upharpoonright_X = \{(a,b) \in R \mid a \in X\}$ と表記する. 特に関数 $f: A \to B$ の $X \subseteq A$ による制限は, 関数 $f \upharpoonright_X : X \to B$ になる.
- $a \in A$, $b \in B$ について、その組を $a \mapsto b = (a,b)$ 、関数 $f: A \to B$ を $f = x \mapsto f(x)$ と表記する.
- 2 項関係 $R \subseteq A^2$ について,その**推移閉包** (transitive closure),つまり以下を満たす最小の 2 項関係を $R^+ \subseteq A^2$ と表記する.
 - 任意の $(a,b) \in R$ について, $(a,b) \in R^+$.
 - 任意の $(a,b) \in R^+$, $(b,c) \in R^+$ について, $(a,c) \in R^+$.
- 2 項関係 $R \subseteq A^2$ について、その**反射推移閉包** (reflexive transitive closure) を $R^* = R^+ \cup \{(a,a) \mid a \in A\}$ と表記する.

定理 1 (Correctness of Substitution). 式 e, 置換 $[\overline{x'} \leftarrow \overline{e'}]$ について, $X = \text{dom}([\overline{x'} \leftarrow \overline{e'}])$ とした時,

$$fv(e[\overline{x'} \leftarrow \overline{e'}]) = (fv(e) \setminus X) \cup \bigcup_{x \in fv(e) \cap X} fv([\overline{x'} \leftarrow \overline{e'}](x)).$$

定理 2 (α -Equality Does Not Touch Free Variables). $e_1 \equiv_{\alpha} e_2$ ならば、 $fv(e_1) = fv(e_2)$.

2.2.2 Typing Semantics

 $\Gamma \vdash e : \tau$

$$\begin{split} \frac{\Gamma(x) = \tau}{\Gamma \vdash x : \tau} & \text{T-Var} \\ \frac{\Gamma, x : \tau_1 \vdash e : \tau_2}{\Gamma \vdash \lambda x : \tau_1 . e : \tau_1 \to \tau_2} & \text{T-Abs} \\ \frac{\Gamma \vdash e_1 : \tau_2 \to \tau \quad \Gamma \vdash e_2 : \tau_2}{\Gamma \vdash e_1 e_2 : \tau} & \text{T-App} \\ \frac{\Gamma \vdash c_A : A}{\Gamma \vdash c_A : A} & \text{T-Const} \end{split}$$

特に、・ $\vdash e:\tau$ の時、 $e:\tau$ と表記.

2.2.3 Evaluation Semantics (Call-By-Value)

$$v ::= \lambda x : \tau.e$$

$$\mid c_A$$

$$C ::= []$$

$$\mid C e$$

$$\mid v C$$

Small Step:

 $e \Rightarrow e'$

$$(\lambda x : \tau.e) \ v \Rightarrow e[x \leftarrow v]$$

$$\frac{e \Rightarrow e'}{C[e] \Rightarrow C[e']}$$

Big Step:

e ψ υ

$$\frac{e_1 \Downarrow \lambda x : \tau. e_1' \quad e_2 \Downarrow v_2 \quad e_1'[x \leftarrow v_2] \Downarrow v}{e_1 e_2 \Downarrow v}$$

定理 3 (Adequacy of Small Step and Big Step). $e \Rightarrow^* v$ iff $e \Downarrow v$.

定理 4 (Type Soundness). $e:\tau$ の時, $e\Rightarrow^* v$, $e \Downarrow v$ となる $v=nf(\Rightarrow,e)$ が存在し,

- $\tau = \tau_1 \rightarrow \tau_2$ の時, $v \equiv_{\alpha} \lambda x' : \tau_1.e'$ となる $\lambda x' : \tau'.e'$ が存在する.
- $\tau = A$ の時, $v \equiv_{\alpha} c_A$ となる c_A が存在する.

2.2.4 Equational Reasoning

$$\Gamma \vdash e_1 \equiv e_2 : \tau$$

$$\frac{\Gamma,x:\tau\vdash e_1:\tau_2\to\tau\quad\Gamma\vdash e_2:\tau_2}{\Gamma\vdash(\lambda x:\tau.e_1)\,e_2\equiv e_1[x\leftarrow e_2]:\tau}\,\,\mathrm{Eq}\text{-}\beta\text{-}\mathrm{Lam}\qquad \frac{x\not\in fv(e)\quad\Gamma\vdash e:\tau_1\to\tau_2}{\Gamma\vdash(\lambda x:\tau_1.e\,x)\equiv e:\tau_1\to\tau_2}\,\,\mathrm{Eq}\text{-}\eta\text{-}\mathrm{Lam}$$

$$\frac{e_1\equiv_\alpha e_2\quad\Gamma\vdash e_1:\tau\quad\Gamma\vdash e_2:\tau}{\Gamma\vdash e_1\equiv e_2:\tau}\,\,\mathrm{Eq}\text{-}\alpha\text{-}\mathrm{Refl}$$

$$\frac{\Gamma\vdash e_2\equiv e_1:\tau}{\Gamma\vdash e_1\equiv e_2:\tau}\,\,\mathrm{Eq}\text{-}\mathrm{Sym}\qquad \frac{\Gamma\vdash e_1\equiv e_2:\tau\quad\Gamma\vdash e_2\equiv e_3:\tau}{\Gamma\vdash e_1\equiv e_3:\tau}\,\,\mathrm{Eq}\text{-}\mathrm{Trans}$$

$$\frac{\Gamma,x:\tau\vdash e_1\equiv e_2:\tau'}{\Gamma\vdash\lambda x:\tau.e_1\equiv\lambda x:\tau.e_2:\tau\to\tau'}\,\,\mathrm{Eq}\text{-}\mathrm{Cong}\text{-}\mathrm{Abs}\qquad \frac{\Gamma\vdash e_1\equiv e_2:\tau'\to\tau\quad\Gamma\vdash e_1'\equiv e_2':\tau'}{\Gamma\vdash e_1\equiv e_2:\tau'\to\tau}\,\,\mathrm{Eq}\text{-}\mathrm{Cong}\text{-}\mathrm{App}$$

特に、・ $\vdash e_1 \equiv e_2 : \tau$ の時、 $e_1 \equiv e_2 : \tau$ と表記.

定理 5 (Respect Typing).
$$\Gamma \vdash e_1 \equiv e_2 : \tau$$
 ならば、 $\Gamma \vdash e_1 : \tau$ かつ $\Gamma \vdash e_2 : \tau$.

定理 6 (Respect Evaluation).
$$e_1 \equiv e_2 : \tau$$
 の時, $e_1' \Rightarrow^* e_1$, $e_2 \Rightarrow^* e_2'$ ならば $e_1' \equiv e_2' : \tau$.

系 7.
$$e_1 \equiv e_2 : \tau$$
 の時, $e_1 \Rightarrow^* e_1'$, $e_2 \Rightarrow^* e_2'$ ならば $e_1' \equiv e_2' : \tau$.

証明. $e_1 \Rightarrow^* e_1$ より、定理 6 から $e_1 \equiv e_2' : \tau$. よって、T-Sym から $e_2' \equiv e_1 : \tau$ であり、 $e_2' \Rightarrow^* e_2'$ より定理 6 から $e_2' \equiv e_1' : \tau$. 故に、T-Sym から $e_1' \equiv e_2' : \tau$.

$$v ::= \lambda x : \tau.e$$

$$| \Lambda t : \kappa.e$$

$$C ::= []$$

$$| C e$$

$$| v C$$

$$| C \tau$$

Small Step:

$$e \Rightarrow e'$$

$$\overline{(\Lambda t : \kappa. e) \ \tau \Rightarrow e[t \leftarrow \tau]}$$

$$\underline{e \Rightarrow e'}$$

Machine

- a rule
- current position in rule

Transition:

- σ
- EOS
- otherwise

Output:

with backpoint バックポイントを設置し、バックポイントに戻った時の次の遷移を指定する. fail した場合一番直近の backpoint まで入力状態とスタックを戻す. reduce 時取り除かれる.

enter reduce 時戻ってくる状態を記録し、次の状態に遷移する.

goto 次の状態に遷移する.

shift 入力を1つ消費し,次の状態に遷移する.

reduce 規則に沿ってスタックから要素を取り出してまとめ、スタックに新たに入れた後、enter 時に記録された状態に 遷移する.

Example

$$E ::= CA$$

$$\mid \varepsilon$$

$$A ::= aB$$

$$\mid a$$

$$B ::= bA$$

$$\mid b$$

$$C ::= ! abab$$

$$\mid \& ab$$
